

Wednesday, August 22, 2012 – Notes

Chemical Reaction: process that changes, or transforms, one set of chemicals into another.

Reactants: substances that enter into a reaction.

Products: substances that are produced by a reaction.

*Example:*

Dehydration Synthesis: a chemical reaction where 2 substances are bonded together and a water is produced.

*Example: The reaction between glucose and fructose to form sucrose. Water is a by-product of the reaction.*
